## **What's New In AutoCAD?**

With Markup Import, you can import all of the data you send from a design program, printer or scanner into your AutoCAD drawings. The data is incorporated into your drawings for immediate viewing or editing, without the need to re-draw your design. Add colors, hatch marks and annotations to your drawings directly in the drawing window, without a separate add-in or non-AutoCAD editing tool. Markup Assist automatically captures your drawing's view, layer and layer settings and customizes these settings for easier viewing and editing. It also displays the active edit tool as an icon on your drawing. Both Markup Import and Markup Assist are available in the 2020 Release Candidate as part of the AutoCAD Start Menu options. Designer Views and Levels of Detail: Automatic selection of feature-based views and levels of detail (LOD) for all objects on the screen. Add and configure LOD based on a selection of desired views, object features, and layers. Use the auto-leveling or "paint-the-levels" capability to automatically correct for depth. (video: 0:46 min.) Layers can be turned off for real-time 3D work. (video: 0:40 min.) Combine multiple layers into a single multi-view/detail layer. (video: 0:27 min.) The 3D & 2D Layers panel now

displays the layer names and dimensions for real-time work in 3D. 2D Geometry View Split the View bar into two separate panels for easy separation of the 2D and 3D views. The 2D Geometry view can display the latest version of any 2D object that has been modified by the user (based on the Outline visibility setting). The new 2D geometry view highlights a limited number of selected items. The 2D Geometry view now displays dimensions when lines, arcs, Bézier curves and splines are selected. Auto-align commands are easily accessible through the 2D Geometry view menu. Layer preview changes and layer visibility are automatically set for the 2D Geometry view. 2D Geometry and 3D views are also available on mobile devices. Extend View/Modify View: Select a section of the drawing for a magnified view of the selected section.
