VBA is a scripting language embedded into Microsoft Office applications and is used for both Microsoft Excel and Word. It is a descendant of LISP and Visual Basic was introduced in 1989. A total of \$26.1 million in hospital equipment and supplies was reported stolen or lost in 2009, the latest year for which complete data is available, according to the report. Of that amount, \$10 million was lost or stolen in a single day in 2009. Among the equipment reported lost or stolen were beds, carts, trolleys and medical equipment such as electronic medical devices, X-ray machines, ultrasound machines and MRI scanners. More than 7,600 pieces of hospital equipment were reported stolen or lost in 2009. Of those, only about half were recovered, and about 400 pieces of equipment have yet to be recovered. "For some hospitals, the losses and thefts are so large that it becomes difficult to keep afloat," said Katherine Burkett, the director of the Pennsylvania Health Care Institute, a consumer advocacy group that studies hospital costs and patient safety. About \$40 million of the equipment that was reported stolen or lost was returned to hospitals that had paid for it. Many of the thefts and losses are minor, such as items that are reported stolen out of the back of a truck or off the back of a moving forklift. But a number of the reported thefts or losses involved high-tech equipment that have long lifespans and sometimes require specialized equipment to operate, a1d647c40b

You've invited a few friends to help, and a British editor is working alongside you. As you make your way to the shoot, it becomes clear to you that the editor has no idea who you are, why you're there or what you do. You're struck by a sudden realization: the Brits are clueless when it comes to celebrity culture and make no effort to educate themselves on it. How to break that down? First, it's not the Brits who are clueless. It's the people who cover them and promote them. The British media, upon hearing the words, "You're doing a fashion shoot in London", would be ecstatic. They're a million times more clued into the fashion industry than the rest of the world combined. It's the New York Times, Time Magazine and Vogue that are full of people who have no idea who Joan Rivers is, or why she's in London. They're like the British editor, so their eyes glaze over every time a celebrity name comes up. It's also a fact that to the vast majority of the British media, celebrity culture has no place in their coverage of the U.K. We live in a monarchy where we are constantly reminded of the people who are considered to be the most powerful people in the world, which makes us less interested in celebrity news. While the British media may be blissfully unaware of what they're missing, the real fact is that American celebrity culture is all about British people having no idea who anyone is, so when we go to London and say we're doing a fashion shoot, they assume we are. It's the same thing as when Americans say, "We're staying at the Four Seasons in London", because that's what the British say. And it ♦
