Introducing the basic design scenario - from designing a 2D structure to preparing files for production... When designing 2D structures, at least At least for me, there are usually 3 issues to consider: 1) Depending on the project, the 2D structure can be either a 2D structure or a 3D structure. For 2D structures, it's basically a matter of "which boxes are boundaries" and "which boxes are windows". For example, this project had a 3D floating point structure with blocks that were not windows, but only borders. 2) After selecting the 2D structure to use in the 3D project, you need to
