Thompson was one of Orange County's most decorated law enforcement officers. He had more than 30 years of service, including six years in the Marine Corps and six years in the Marines Reserve. Acoustic wave devices are known to be widely used in high frequency electronic communication devices such as cellular phones, etc. Such acoustic wave devices have been developed to perform various functions, such as high-frequency signal processing, and are indispensable in high frequency electronic communication devices. In these years, research and development is actively conducted on acoustic wave devices that can be installed in high-frequency communication devices, such as cellular phones, etc. In acoustic wave devices of this type, a plurality of delay lines is arranged in a lattice form, and a plurality of IDTs (interdigital transducer) is arranged at specified portions of these delay lines. In these acoustic wave devices, the plurality of IDTs is formed of a plurality of pairs of comb electrodes. Each pair of comb electrodes of the IDTs correspond to a pair of delay lines, and the plurality of pairs of comb electrodes are connected to each other. In each of the IDTs, the plurality of pairs of comb electrodes are arranged in the direction in which the acoustic waves are propagated. In this case, the plurality of pairs of comb electrodes and a part of the delay
