So it's often useful to use professional tech support for quick problems. Of course, you can find tech support for free online on forums and chat rooms, but it may take some patience to find the best support for free. ## Adding a layering system The layers in the Photoshop workspace provide a simple way to combine graphics into various groups, or *layers*, making it possible to have complex layouts without having to separate them into separate files. By separating your photos, drawing, text, and other elements into separate files, you increase the file size and decrease file usability. ## Saving in various file formats Most image-editing software can save and export your images in a variety of file formats, from the standard JPEG to high-quality TIFF to bitmapped formats such as CMYK. Photoshop can save in both JPEG and TIFF formats, and both save the files as 16-bit files, which provides more headroom than the 8-bit formats that most web browsers use. Photoshop also supports the RAW format; this format is not considered to be a standard for storing images on the Web. You can also save your images in Web-safe formats such as GIF, PNG, JPEG, and JPEG2000. The differences among these Web-safe formats include the color space they use, the compression technique they use, and the size of the compressed file. *Image compression* reduces the file size, making the image easier to store and transmit. Most of these formats save files as 8-bit files, which don't provide as much headroom as 16-bit files. The advantage to 8-bit files is that they are smaller and the

Q: How to delete some rows by specific dates in pandas? I need to delete some rows in the following dataframe: `import pandas as pd import datetime some = {'animal': [1318, 1318, 1318, 1318, 1320, 1320, 1322, 1322, 1322, 1324, 1324, 1324, 1322, 1320, 1320, 1322, 1322, 1320, 1322, 1324, 1322, 1322, 1324], 'date': ['2019-05-01', '2019-05-01', '2019-05-01', '2019-05-02'], 'number': [27, 19, 10, 11, 12, 18, 18, 18, 16, 16, 18, 18, 18, 20, 20, 20, 18, 18, 18, 18, 18, 18]}` `some = pd.DataFrame(some)` The dates in the dataframe are dates that have been imported to the dataframe from an external source, so they are not always in chronological order. That is, the first record is not always the first record in the dataframe. I have tried using the following code, but it didn't work: `some = some.groupby('date').groupby('animal').apply(lambda x: x.dropna(subset=['number']))` I'm getting this error, however: `KeyError: 'number'` A: if you want to drop rows in groups then create new DataFrame and add Series: `df1 = (df.loc[df['number'].isna(), 'animal']`

Q: How to annotate Python function with docstring? I have a huge Python program with functions. They have a docstring because I like to read the comments, but I can't autocomplete it because the docstring is not a real docstring. How can I annotate a function with a docstring? A: Any Python file can be setup as a docstring function by setting: `# -*- coding: utf-8 -*-` at the top. Today, Doki Doki Literature Club! will hit PS4 with its fourth game, Tomodachi Life, arriving digitally and in stores on July 6. There will be an announcement trailer for Tomodachi Life later this year, as well as DLC and we're sure to see more announcements in the lead up to the game's release. We're told to expect more trailers, possibly at E3, before the game releases. In the mean time, let's talk about how Tomodachi Life came about. The first Tomodachi Life, Doki Doki Literature Club!,
