A: This has been asked before, but was not given an answer so I'll give it a go. I've searched for the tool they used as far back as I can go and didn't find it. The fact that they added the tool tells me that they had to buy a license of Autodesk Inventor or Autodesk Fusion 360. There are also other tools that I found, but it is likely they used them as well. I cannot give you what they used as I have no idea who they are, what software it is or what company they are affiliated with. This can either be because the tool is free, or they purchased it, or they don't want anyone to know. There is a lot of money involved in software and I can understand that they may have bought it from a reseller. From a technical standpoint, the question is asking if Autocad (Autodesk Inventor) or another tool (Fusion 360) exists, is it possible to import a DWG or DXF file into this software so the autocad developer can work on it. From this standpoint, the answer is no. The reason why is because these are two completely different software programs, with completely different API's. They could not simply load an Autocad file into Autodesk Inventor or Autodesk Fusion 360 and expect it to work. What is possible, however, is to open and modify Autocad files in Fusion 360 or Autocad Inventor using these API's (Autocad 2012 and Autocad 2017 respectively). Once you have the DWG or DXF file open in Fusion 360, you can then do anything you can in Autocad such as change parts, move parts, add, subtract, etc. Using a different API, Autocad Inventor, you would be able to do
