Children of alcohol-dependent parents are at increased risk for problems, with 50% having fetal alcohol syndrome (FAS) and 30% a partial FAS. There is little information on these children in the literature, yet it is imperative to determine the developmental risks that these children are at risk for in order to prevent lifelong problems. The research questions addressed were: (1) Is there evidence of an increased prevalence of mental health problems in children of alcohol-dependent parents? (2) Is there evidence of an increased prevalence of personality disorders in children of alcohol-dependent parents? and (3) Does maternal abstinence during pregnancy reduce the prevalence of mental health and personality disorders in children of alcohol-dependent parents? The existing literature was reviewed, and four primary studies were identified for this review. The study discussed in this paper is a secondary analysis of data collected in a 20-year follow-up study of children of alcohol-dependent parents. Mixed results were found. One cross-sectional study demonstrated an increased risk for internalizing problems in children of alcohol-dependent parents. Two studies found no difference in the prevalence of internalizing or externalizing problems between children of alcohol-dependent parents and children of alcohol-free controls. The fourth study found a substantial reduction in the incidence of internalizing problems in children of alcohol-dependent parents as a result of maternal abstinence. These results underscore the need for continued research on the mental health problems of children of alcohol-dependent parents.and in Los Angeles, also a hotbed of 1,000-mile-per-hour (1,609 km/h) lightning. The city used to have an average of almost 400 storms each year, but since 2010, only 45 have been recorded, the FBI says. To compare, Washington, D.C. had about twice as many storms as that number. In the past three decades, Los Angeles recorded less than 10 (see the chart below). The FBI says the largest recorded outbreak of LBDF, or lightning-caused death, was in a Miami-area suburb in 2010, when seven people were killed by strikes. 6d1f23a050
