I want the grid to be zoomable to see all the details at one time I am using this : It is working well on only one device. But when I tested it on multiple devices I saw that the css is not responsive. I tried many options but it didn't work. And also I want to know which grid is best for this kind of requirement. A: Gridster uses some media queries so for that you will need to define some breakpoints. Anyways, Gridster is responsive and I would highly recommend it over bootstrap-gridster. Mild cognitive impairment (MCI) is a condition that overlaps with the full range of dementia but, unlike dementia, is nonprogressive. The clinical significance of MCI is not yet well established. Research efforts have mostly focused on its putative relationship with Alzheimer's disease (AD), but more recently on its own prognostic significance. The number of elderly people with MCI has been on the rise for several years. Currently, the majority of subjects with MCI are not treated, although the incidence of progression to AD dementia has not been completely elucidated. As an unavoidable result, the number of elderly people who develop AD dementia is growing. Therefore, MCI is also becoming an important public health issue. This review provides a brief overview of the classification of MCI and its underlying pathophysiological processes. We discuss current available data on the prognostic significance of MCI and its contribution to the diagnosis of AD and other forms of dementia. Finally, we address several key clinical issues for patients and their care providers.Pulmonary tuberculosis during pregnancy: risk factors and treatment outcomes in a tertiary care center.
