It's not a surprise that the main focus of Lightroom 5 has been the speed of workflow. For the rental version, Adobe has clearly cut back the flexibility in a number of areas to cut costs. We've received a ton of feedback on the workflow of users who purchased Lightroom, as it's not possible to use the rental version as a full time workflow solution. We spent a lot of time on the user experience of import and export - in fact, this was our most critical area. We have completely overhauled how to import photos and documents directly from devices or through Dropbox or other cloud service providers. The most important leap forward in Lightroom is the fact that we've removed the need to import RAW files twice and have also improved the processing time to process photos quicker. Finding inspiration in a photograph is a wonderful thing, but sometimes you need to start all over. When you want to create a design from scratch, you're going to run into problems, or at least the possibility of problems, especially if you like to work with large Clip Art images that may be distorted, out of focus, and so on. The solution is not to rip off the image, but to re-create an approximation of it. Sometimes one's work resembles a runway in a fashion magazine—and you need to put that work on a magazine in the form of a cover. There have been times when I've wanted to create a logo or other digital text in Photoshop that resembled a storyline. My method has been to duplicate an image, then photocopy it, cut it up, and transfer it over to the »photo-board.« When you need some additional ideas for using Photoshop, how about this list of the best exercises made with the latest features for you to try, presented in a slide show.
