Each of these sections has a number of different categories where you can create custom color choices inside the window. You can save your custom colors, modify them, copy them, and even distribute them to a different color scheme in your document you're working on. Plus, you don't have to commit to your custom colors; you can keep your custom colors on a separate layer as a pallet. Let's dive into how each section works. Each section is very customizable, so you don't need a tutorial to make your own unique color palette. Simply duplicate to create your own custom color palette. Adjust your colors to your liking with the eyedropper tool, and apply some great-looking colors to the new layer. Learn how to sculpt and reshape colors with the eyedropper tool in Adobe Photoshop. Now that you have your custom palette, it's time to get creative with your custom canvas . You can apply the new layer as a background, use it as a blending option, or even use it to create your own custom path. Learn how to use new Photoshop tools to create your own texture. OK, now that your Fireworks file is open, all we need to do is get the text we want showing on the page laid out, which we can do by selecting it, and adding an object to the page anywhere you like — perhaps under the Insert menu (or via a "Quick Selection" tool whose top options are more specifically itemized here): Now that the text layer is visible, it's time to add some lighting effects. Fireworks lends itself to that well by allowing us to use the Filter menu, which is accessible via the top menu area under Edit:
